Property Verification Report

Property Details

Survey Number	TESTaa5ae3
Khata Number	KH2af7
State	Karnataka
District	Bangalore Urban

Risk Score: 15/100

Status: RED

Recommendation: HIGH RISK LEGAL REVIEW REQUIRED

Executive Summary

This property presents extremely high legal risks due to the fundamental lack of verifiable information. The provided government records are explicitly stated as mock data, rendering them unreliable for any real legal assessment. Furthermore, the content of the crucial sale deed, which should establish the seller's title, is entirely missing. Without real documents and data, no conclusive risk assessment or recommendation can be made.

Red Flags (Critical Issues)

- Critical Data Unverified (MOCK DATA):** The government records provided (Bhoomi RTC, mutation, encumbrances, litigation, CERSAI) are explicitly stated as 'MOCK DATA'. This means no legal verification of ownership, encumbrances, or litigation status has actually occurred. Reliance on this data is not possible for a real transaction.
- Primary Sale Deed Content Missing:** A 'sale_deed' document was indicated as uploaded, but its 'ocr_text' and 'extracted' fields are empty. This means the core document establishing the current seller's title, the property's legal description, any associated covenants, conditions, or encumbrances mentioned within it, has not been reviewed. Without this, legal ownership cannot be confirmed.

Yellow Flags (Caution Required)

- Khata Number Inconsistency:** The property details state Khata No: 'KH2af7', while the government records show 'KH-TES-2024'. This discrepancy needs to be reconciled with actual official records to ensure the correct Khata is associated with the Survey No and owner. This is likely a mock data inconsistency, but would be a material point in a real transaction.

- **Agricultural Land Classification:** The land is classified as 'Agricultural (Bagayat)'. If the buyer intends to use the property for non-agricultural purposes (e.g., residential, commercial), a formal 'DC Conversion' (Diversion of land from agricultural to non-agricultural use) will be required. This is a separate process involving approvals, fees, and potential delays, and the property's current use may not be compliant with buyer's intent without it.

Green Flags (Positive Indicators)

- **Clear Mutation Record (Mock Data):** The mock mutation record indicates a sale transfer to the 'Current Owner' on 2020-01-15 (MUT-2020-1234), suggesting the title change was updated in the land records. However, this is based on mock data and requires real verification.
- **No Reported Encumbrances (Mock Data):** The mock government records indicate no encumbrances. The mock CERSAI check also shows no registered mortgages. While positive, this cannot be relied upon due to the mock nature of the data.
- **No Reported Pending Litigation (Mock Data):** The mock government records report no pending litigation against the property. This is a positive indicator, but it is based on mock data and requires real verification.
